

Climate Change

Climate change is bad for humanity. Climate change is due to deforestation. There is a lot of things which are responsible for this cause.

The increase in industries is one of the major causes of this problem. Due to this, pollution is taking place and due to this pollution acid rain is happening which causes skin problems and it ruins marbles of our wonder i.e. Taj Mahal.

The population is another major cause of climatic changes. Humans throw garbage on the river and pollute rivers that break the cycle. Global warming is occurring due to climate change. We have to save our forest to cut. Stop using self-vehicles and use pool cars. In the summer season, most of the people using AC emitted CNC gases which destroy our earth's ozone layer. The ozone layer protects us from the sun's harmful radiation. According to a study scientist claims if this problem is not getting fix immediately then after 30 to 40 years it totally destroys our earth's ozone layer.

Our farmer faces a lot of problems due to climate change because rain has happened unwanted which ruins their farms. The government has to take some strict action to fix this problem. They have to make some set of rules that helps us to control this problem.
